

# Bas Milius

FULL-STACK DEVELOPER

## Self-employed

JUNE 2020 – NOW

Owner – Created a backend platform for a holiday park in Groenlo (Marveld Recreatie) that has modules such as ticketing, app content and food ordering. Also making small websites for local companies.

</> PHP 8, HTML, (S)CSS, TypeScript 5.5, Vite, WordPress, Linux, Flutter 3

## WeAreFancee / Tibbaa

JUNE 2022 – JUNE 2024

Senior Full-Stack Developer – Developed a rewrite of our ticketing-as-a-service platform with a small team, taking responsibility for the front-end and mobile application development. For both the front-end and app I created a custom made UI component libraries that can both be found on my Github account.

</> HTML, (S)CSS, TypeScript 5.4 / JavaScript, Vue.js 3.4, Vite, Flutter 3.

## IdeeMedia

JUNE 2016 – JUNE 2022

Full-Stack Developer – Worked on lots of various projects here, from small websites for local companies to large backend systems. Server management was also one of the things that I was responsible for, this included creating a new hosting platform from scratch. Working here also required a lot of contact with customers and providing them with technical support.

</> PHP 7-8, HTML, (S)CSS, TypeScript, WordPress, Linux, App

## IMTheSolution

2015

Internship – During the period that I went to school at Graafschap College, I did an internship at IMTheSolution. Here I learned to work with Xamarin, among other things, and I found out that mobile app development does interest me, just not with Xamarin.

</> C#.NET, Xamarin, HTML

## Deltion College

2017 – 2020

Application developer – After a two year gap I was still motivated to get my degree, so I decided to restart my education at Deltion College. All the effort I put into education was worth it because I managed to get my degree!

## Graafschap College

2012 – 2015

Application developer – I wanted to explore this interest in programming even more. I already had some self-knowledge of programming which made school really easy for me, maybe even a bit too easy... It was also the reason why I quit school for a few years.

## Marianum

2008 – 2012

Commerce & administration – My interest in computers has already been there since I was a kid. I even hacked the schools wifi once. It was very easy for me to choose the subject "Commerce & administration" in middle school. I got to learn a bit about administration.

github.com/basmilius

Hi! I'm Bas, a 28-year-old self-taught developer from The Netherlands. Programming started as a hobby in 2008, leading to a successful career. In my spare time, I explore new programming-related projects. I have several open source projects available on my work page, with the latest being Meteocons, a set of animated weather icons. I primarily use JetBrains tools like PhpStorm and IntelliJ Idea, and host all projects on my own Debian-based servers. In 2013, I won two gold medals for programming.
